
Inference requests
Request 1
model + input
Request 2
model + input
Request N
model + input
submit request
Global coordinator
Preparation
Prepare model
Partition graph
Materialize partition inputs
Create proof jobs
Management
Track active requests
Track job progress
Manage jobs across requests
Job placement
Request progress
Cache Metadata
Select target node
Historical Profiles
read/write
Shared artifact store
Model artifacts
compiled model, metadata
Partition inputs
intermediate tensors
Reusable setup artifacts
compiled circuits, proving keys
Proofs and outputs
assign proof jobs
status, completion, profiles
read/write
Prover nodes
Prover node 1
Local supervisor
Stage admission
Stage profiles
Local cache
Prover processes
Prover node 2
Local supervisor
Stage admission
Stage profiles
Local cache
Prover processes
Prover node M
Local supervisor
Stage admission
